Overview

PROSYS ERP Solutions is user friendly, dynamic and flexible solution, where end-users can define or change their business processes without any need of going into complexity of source code.

PROSYS develops ERP solutions that transform the way people work & communicate into easier workflow. Our ERP solutions help to automate your business processes and leverage technology to unify your pan-enterprise functions.

PROSYS Software Solutions Products, has been developed based on workflow oriented hybrid services (client server & web based) architecture using the development tools besides open technologies such as Microsoft Dot Net, ASP (Active Server Pages), Microsoft SQL.

The front-end of the application has been built around Microsoft technologies where as on back-end it is designed RDBMS independent software. PROSYS Software is a completely object-oriented application which provides modularity and high degree

of maintainability to the software. Also since we have used open technologies, it provides the power to make a hybrid solution of various environments and make use of latest technology irrespective of the environment they are available in.

PROSYS Software has always maintained a leading edge in technology since its inception, and this also provides power to the customers to build their specific components on top of this , such as reports or additional modules or extended functionalities.

Features

PROSYS Software strengths. Features, that make PROSYS Software such a powerful product, are:

> PROSYS Software is an ENTERPRISE solution. It is a Process-Based System. PROSYS Software maps your existing business processes. This ensures that the acceptability and unique nature of business processes of your organisation can be supported along with the recommended Best Business Practices.

> In PROSYS Software, the process will be defined as per the organisation's current practices and requirements

> Any change in processes or defining or new processes can be done without shutting down the system or having to inform any users. This is what we refer to as Dynamic Business Process Reengineering. There is a substantial difference from systems which have 1 or 2 predefined processes for any functional area.

> Powerful Definition System. PROSYS Software has an efficient 'Definition System' that makes it configurable for any organisation. The feasibility of definable processes allows you to implement PROSYS Software with minimal amount of customisation. Its advanced Process definition facilities make it a highly versatile system, which dynamically configures business processes to adapt to your changing requirements.

> Easy to Modify and Customise PROSYS Software has the potential to adapt itself according to the customer's specific business requirements.

> Hierarchy and User Access PROSYS Software install a core system, which organises your company structure in terms of hierarchy and designations. It provides definitions for different levels of hierarchy:

Top level management, Middle level, Supervisory staff,Operating staff, each department its own hierarchy levels varying from Middle level to operating staff. The people at these levels are further defined into specific designations.

> Security and Authorisation When the PROSYS Software system is in place, it integrates and binds all the departments of an organisation. At the same time, it ensures that the people at all departments and at all level in the organisation access only the information they need and are authorised to access. Software security is based on our concept that security should be difficult to break but easy to administer. Software can restrict user access not only at the menu or functional level but even at some tabs level within a functional area.

> Powerful Windows Features the user interface of PROSYS Software is completely Windows based. Surfing through PROSYS Software is a child's play for anyone who is acquainted with the Windows operating system. And its powerful GUI makes it very user- friendly even for those who are not used to the windows environment. PROSYS Software makes extensive use of controls like Tabs, Windows, Tree views, Command Buttons and Menus. And all the interfaces are well provided with micro helps and power tips.

> Low Total Cost of Ownership. PROSYS Software works on Intel based servers which are among the most economical hardware platform for computing. PROSYS Software requires Windows 2003-2008 server and Microsoft SQL Server which is a low cost integrated solution. Version releases, patches, updates are given free of cost to all our clients. among the lowest total cost of ownership as compared to any other ERP solutions.
